1. Make a picture from the side while smiling

2. then compare the sagittal position of your front teeth compared to the nasion (image a vertical line from the nasion - nasion line)

results:

if your teeth are at the same lvl wih the nasion line your maxilla is average

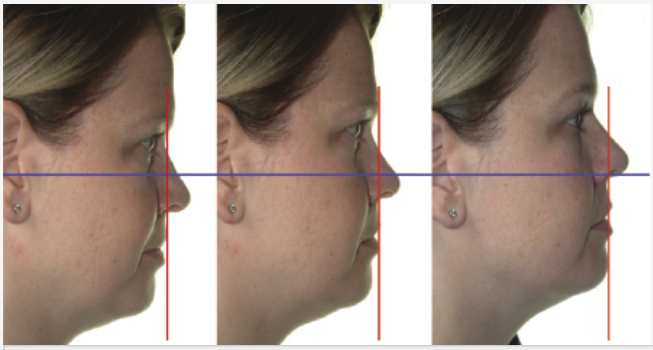
if your teeth are beyond the nasion line your maxilla is protruding

if your teeth are behind the nasion line your maxilla is recessed

important things to consider while taking the pics:

its crucial that you have an neutral head postion while u make the pic meaning

no tilting



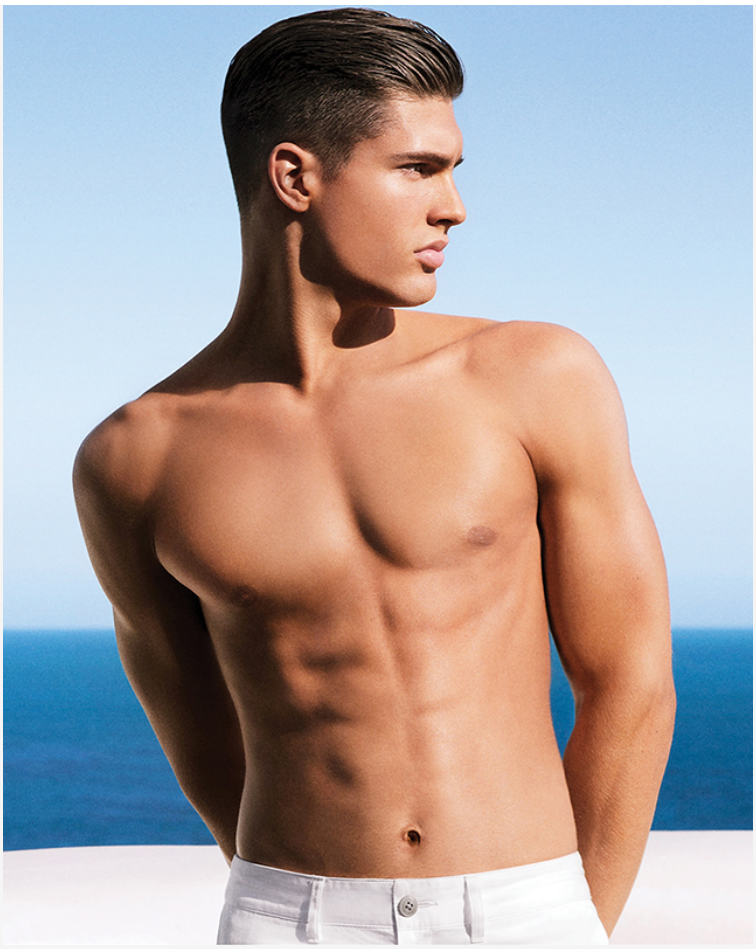
Quote:

Habitual tilting of the head to the left or right side should be avoided.

often people tilt their head up when they take a profile pic which is not legit

example how NOT to do it

also dont hold in the cam in front of you and then just turn your head to the side like this



camera game must be on point aswell - meaning

at the same vertical lvl with your face

at the same sagittal lvl with your face

if the camera angle isnt perfect the results are worthless

besides if your teeth are protruding like this this method obviously wont work

clearly protruding maxilla but recessed chin (could be cuz I was somewhat of a mouthbreather from 7-12)

it's over 4 me

Not true. It's not a reliable indicator since the dentoalveolar processes may be off in all the directions as well. Not to mention the properly inclined anterior teeth are behind the nasion perpendicular providing the maxilla is average.

this an average skull

the front teeth are beyond the nasion line

its titled back tbh, most people's occlusal planes aren't parallel to the ground in a neutral positio

It was over before it even began.

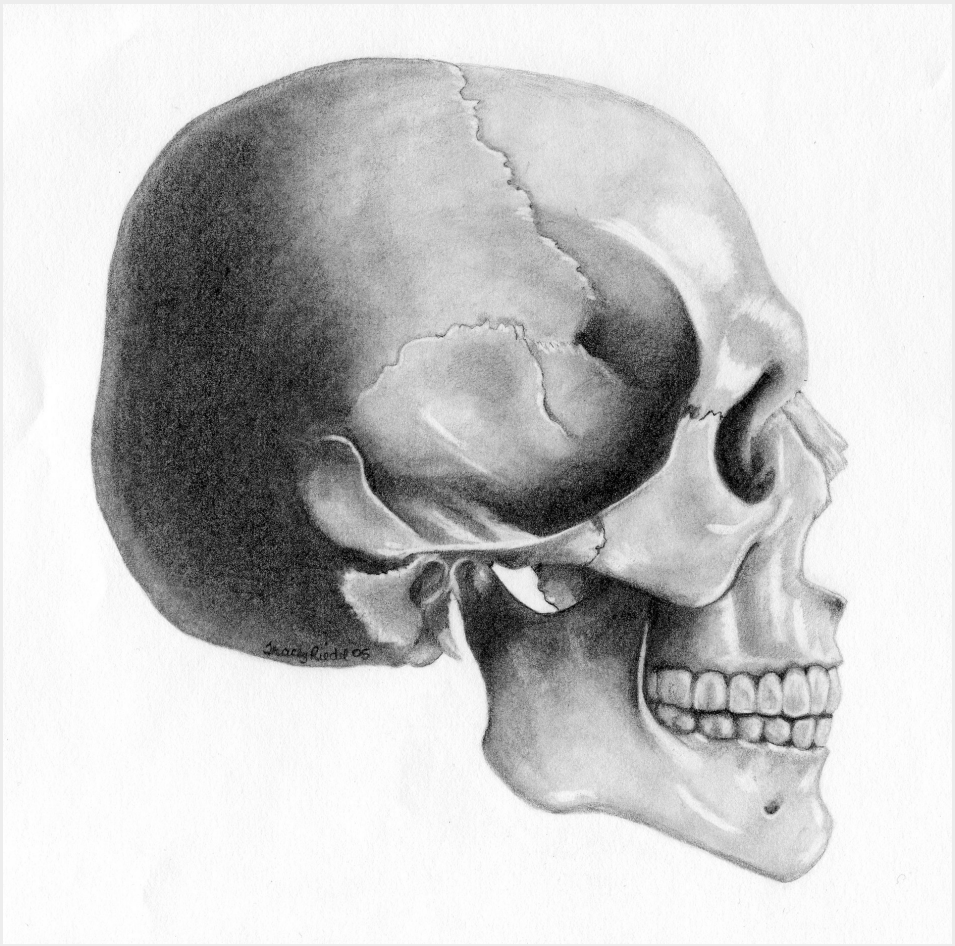
this an average skull

the front teeth are beyond the nasion line



What are the landmarks telling you whether or not that skull has proper orientation? How do you know if that's not tilted back or forward?

@cuck king

@JustTheWayYouAre

i just can advice all guys whose teeth are visible behind the nasion line to visit a maxfac and get a x ray for 40$

my predictions then will be confirmed

Don't need this test but thanks..
I know I have recessed Maxilla by my Sceleral show, NCT, cheekbonCelness, negative vector...

A modified Lefort 3 is ideal for me..but last time I asked a surgeon if I am a good candidate, he laughed

imgur.com

you posted sth completely different out of context tbh

not neutral head positon

not perfect vertical pendulum line

imgur.com

So a male skull has a more recessed maxilla relative to the nasion than children or women. Kind of knew this intuitively.

the frankfort plane is a good approximation of it

It was over before it even began.

Nice cope buddy.

If you deny the relevance of frankfort plane, then you can claim ANY head position is the neutral head position and tilt it in whatever direction you want, and thus simulate both the retrusion and protrusion.

The nasion perpendicular is supposed to be perfectly vertical line, and the slight deviation in the drawings won't change the fact it was meant to illustrate the ideal proportions as opposed to regular norms compiled by orthodontists (aka normal aka non-ideal).

I can open any maxfac book and provide more precise illustration but I am too lazy to do that.

The image you are requesting does not exist or is no longer available.

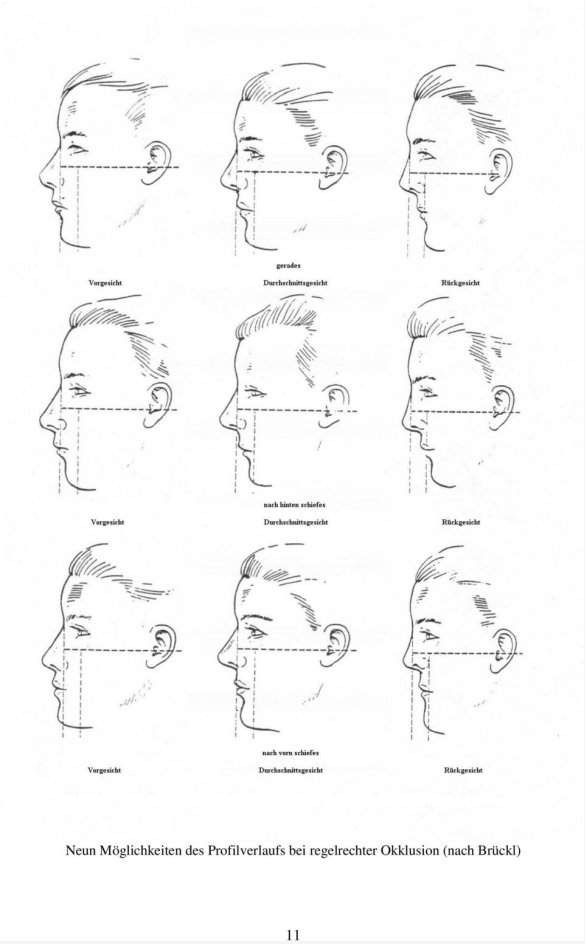
@**JustTheWayYouAre** is working with the old profile defintion of a.m. schwarz - this was debunked years ago

just some extraction from a.m schwarz work



Neun Möglichkeiten des Profilverlaufs bei regelrechter Okklusion (nach Brückl)

11

according to a.m. schwarz the face in the middle of the upper row is the average and normal face aka not retruded

you can already tell that this is obvious bullshit

i even read a dissertation on german about how a.m. schwarz work was bullshit, especially from a aesthetic point of view

Most whites, even GL ones, have profiles that are slanted back slightly as in that picture

So many people tilt their head up that it's hard to tell though

It was over before it even began.

Legit. Maxilla decides your looks the most. I see tons of guys with melted mandibles and bad, high-set eyebrows do just fine but a badly recessed maxilla guarantees inceldom no matter how good the rest of your features are.
